SUMMARY

Software Engineer experienced in designing and developing scalable backend systems and distributed services on cloud infrastructure. Adept in end-to-end software development from architecture and implementation to testing and deployment, with a focus on reliability, performance, and operational excellence. Passionate about building impactful, production-ready software that improves experiences at global scale.

EDUCATION

Arizona State University

Bachelor of Science in Computer Science

GPA: 3.99 / 4.00

Jan 2023 – May 2026

TECHNICAL SKILLS

Languages & Frameworks: Python, Java, C++, Go, PHP, TypeScript, FastAPI, Flask, React, Node.js.

Cloud & Infrastructure: AWS (EC2, ECS Fargate, Lambda, S3, CloudWatch), Docker, Kubernetes, Redis.

Core Competencies: Backend Development, Distributed Systems, Microservices, API Architecture, Data Structures & Algorithms, Object-Oriented Design, Performance Optimization, Process Automation.

Practices: Agile SDLC, CI/CD Automation, Testing & Debugging, Code Review, Monitoring, System Design.

ENGINEERING EXPERIENCE

Software Development Engineering Intern

May 2025 – Aug 2025

Amazon

Tempe, AZ

- Designed and deployed a **distributed compliance API service** processing **250K+ daily requests** across Amazon's global marketplaces, enabling immediate policy enforcement through a new token-based architecture.
- Delivered **zero-downtime blue-green deployments** with automated rollout validation, integrated monitoring hooks, and health-based routing, ensuring seamless transitions and rollback safety during version upgrades.
- Optimized backend throughput by **eliminating a legacy table dependency**, simplifying request flows and reducing p99 latency by **17.8%**, improving overall reliability and operational performance.
- Collaborated with senior engineers on **design reviews, on-call debugging, and system integration plans**, ensuring fault tolerance, maintainability, and security compliance across multi-region services.

Research Analyst (Software Engineering)

Jan 2024 – Present

Arizona State University — Learning Enterprise

Tempe, AZ

- Contributed to **AI Grader**, a FastAPI microservice integrating Canvas LMS, HubSpot, and Airtable APIs with async queues and **round-robin load balancing**, participated in **on-call rotations** to debug and **resolve production issues**, cutting manual grading effort by **45%**.
- Developed an AI-driven Market Intelligence platform using Python and FastAPI to orchestrate **RESTful API integrations** (SerpAPI, Coursera, Lightcast, Google Trends, ChatGPT API), automating data collection and analysis workflows.
- Leveraged **AI-assisted development workflows** (Claude Code) to achieve **30-40% productivity gains**, translating ambiguous requirements into production-ready features while maintaining code quality through rigorous testing and peer review.
- Assisted **department-wide enablement of agentic AI workflows** using **Claude Code** and Canvas MCPs, empowering non-technical teams to automate course operations.

PROJECTS

AI Transcript Service

Arizona State University — Learning Enterprise

- Contributed to a **cloud-native, distributed transcription platform** enabling asynchronous audio/video processing with containerized **API and worker microservices** on **AWS ECS (Fargate)**, scaled **ASU-wide** and recognized by ASU's President for innovation.
- Owned ASR evaluation and benchmarking in Python, calculating WER/CER to assess transcription quality and compare outputs against existing ASU systems - informing accuracy, reliability, and rollout decisions.

Vedant Healthcare Platform

Vedant Group

- Built and deployed **two production healthcare web applications** (vedantdiagnostic.com & vedantanalytics.in) with online booking, searchable catalog of **100+ diagnostic tests**, disease navigation, and B2B lead generation - driving **35% increase in bookings** and **65% organic traffic growth**.
- Implemented **full-stack features** end-to-end using Next.js, React, TypeScript, and Tailwind CSS, including API routes with **rate limiting and validation**, email notification workflows, and **SEO optimization**.
